

René Riemens CEO at SWYCS

Will Middelburg's invention SWYCS be the digital 'Egg of Columbus'?

PRESS RELEASE

SWYCS is a Dutch tech company that is leading the IoT market (Internet of Things). Company PNE Industries LTD from Singapore made a significant investment in SWYCS. "We have high expectations of SWYCS and think that many companies will use SWYCS in the near future," said PNE managing director Kevin Tan. PNE is a major producer of electronic equipment and sees SWYCS as a potential game changer in the IoT world.

One platform that can control and communicate with your smart devices and installations in your company or home? The Middelburg technology company SWYCS - See What You Can Save – developed that new concept. With Singapore's growth capital, it now expects to conquer the world.

DIGITAL SPAGHETTI

The number of smart devices at home and in the office increase rapidly. But with all the applications that run through different platforms and networks, management will be difficult. SWYCS unveils the digital spaghetti. And more than that. "Our system ensures that all smart devices and installations can" talk "with each other. No matter what type of device and manufacturer. Such a complete and universal solution does not exist yet. "

A small demonstration. Mr Riemens steps on a digital scale and immediately a lamp lights up so that he can read the display better. "Normally, the scale and the lamp do not understand each other, but via SWYCS they do." SWYCS connects smart devices that communicate with all (wireless) networks like ZigBee, Z-Wave, BLE, EnOcean, Sigfox , LoRa and WiFi.

SWYCS consists of an Internet of Things gateway that looks like an internet modem with five antennas, a cloud layer containing data, a web portal and a smartphone app. The dashboard is intuitive and user-friendly, underlines Mr Riemens.

IBM

The invention, which he developed with the support of a local business partner and a local government fund (ZPF), opens up new opportunities and saves customers a lot of costs and time. It is one solution that suits many application. The price is a no-brainer. You get a Rolls Royce for the price of an Opel. "

Mr Riemens started his business in energy management. Dura Vermeer, a Dutch top 5 construction company, will now install SWYCS in hundreds of homes, says Mr Riemens. "We have many Dutch customers and we now go international. There is a growing global interest. For example, IBM works with us. And more global major players are using our IoT solutions or took them in their IoT Eco system.

'All signs are green now'

In addition, the gateways are built at PNE Industries in Singapore, are in stock and are therefore available immediately. Mr Riemens chose five years ago explicitly for an Asian partner: "Singapore is step stone to Asia".

PNE also believes that SWYCS is going to be a million business. The first step is a trade mission to Indonesia, Malaysia and Singapore in September. That visit is led by former Prime Minister Jan Peter Balkenende.
