# Preventive Maintenance

Get to know SWYCS. The all-in-one solution for housing associations, installation companies, care facilities, project developers, architects and construction firms. The SWYCS Preventive Maintenance basic cabinet enables you to get the best out of equipment and smart devices in such places as homes, office blocks, schools, local authorities, industry, hotel and catering establishments and the agricultural sector. We are a certified Independent Service Provider (ODA). Use SWYCS and you will be ready for the future.

**SWYCS**

# Smart maintenance

**SWYCS supports all building systems, irrespective of brand or type.**

**The SWYCS Preventive Maintenance basic cabinet allows you to monitor and operate all heat pumps, central heating equipment and solar panels remotely. If an error message is imminent from the solar panels on one of your buildings, a support ticket will be raised. An engineer in the area will be sent an alert via the app, specifying what components are needed to remedy the fault.**

We offer connections to third-party software, e.g. planning software, analytics software, FMIS software and existing building management and ERP systems. You will have optimum insight into the status of your equipment within your business premises and properties. Maintenance processes are automated and organized efficiently.

## More efficiency and lower costs of maintenance:

- **Connecting:** The SWYCS Preventive Maintenance basic cabinet connects all building-specific equipment, smart devices, sensors and players.
- **Amassing:** All relevant data is read out, in real time or periodically.
- **Managing:** The online portal allows you to manage simple processes remotely.

## A single app for everything

Real-time insight at all times through the user-friendly portal and app. Equipment and devices are easily operated and adjusted. Building managers are automatically notified in the event of anomalies.

## Reliable and stable

SWYCS Preventive Maintenance basic cabinet works fully autonomously, with a guaranteed emergency power capacity of a minimum of 1 hour, a data backup of 1 month and a reliable and stable infrastructure.

## Unique

SWYCS is unique in the world. Whereas other suppliers often stop at the software or the hardware, SWYCS offers an integrated total solution.
